This tutorial is to teach you how to use the "Sistema de Reserva de Salas e Equipamentos" (SisRES). Before run it, install Java 7 and MySQL database. After installing and following the instructions from the README.txt, you are ready to properly use the software.

The main purpose of the system is to allow a student or teacher to reserve School classrooms and a teacher to reserve a equipment (only datashow for now).To do so, you must first register one or more students and/or teachers. You can do that by clicking the respective button on the main screen.

In the Teacher/Student menu you can register, modify or delete a teacher or student.

In the Equipment menu you can do all that and also reserve a equipment to a teacher. You do that by selecting a equipment and clicking "Visualizar Horarios". After that you must select a day and click the button "Visualizar Reservas do Dia".

In the Classroom menu you also do what is done at Equipment menu, but a student can also do a reservation. If a room is reserved to a teacher, the student must select another time or class. If a teacher wants a room reserved by a student, the student reservation is canceled and the teacher gets the room.
